

Small symposium

'The front line of food safety risk assessment'

Microbiological risk assessment is a relatively new field of study which scientifically endorses risk management and the importance is being recognized by the activities of Joint FAO/WHO expert meetings on microbiological risk assessment. This approach is also being applied in developing countries.

The present symposium will invite scientists working on food safety risk assessment at the front line of inside and outside Japan.

It is such an excellent opportunity and undergraduate and graduate students and faculty members are encouraged to attend. This symposium will be held in English as an official language.

Date: 2012, September 10th (Mon), 9-12am

Venue: C4 Building 102, Rakuno Gakuen University

528 Bunkyo-dai Midorimachi, Ebetsu, Japan

Presenter: Dr. **Hajime TOYOFUKU**

(National Institute of Public Health, Japan)

Expert, Food Safety Commission of the Cabinet Office, Japan

'Current status and challenge of food borne microbial risk assessment in Japan'

Dr. **Kohei MAKITA**

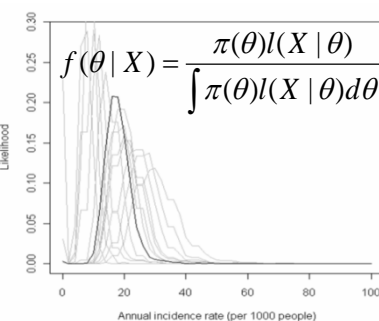

(Veterinary Epidemiology, Rakuno Gakuen University)

'Promotion of participatory risk assessment and poverty alleviation in developing countries'

Professor. **Bassirou BONFOH**

(Director, Centre Suisse Recherches Scientifiques en Côte d'Ivoire)

'Risk assessment in the One Health agenda in Africa'
